

Strategic Product Management for Marketers[™]

COURSE DESCRIPTION

Strategic Product Management[™] (SPM) - This two-day core seminar provides attendees with the knowledge, skills and tools to effectively plan and market technology products and services. Product management is a domain that holds two disciplines: product marketing and product planning. Accordingly, this seminar is based on the Product Manager's Toolkit[™] (PMTK) and PMTK Action Model - a comprehensive set of product planning and product marketing work templates, and accompanying process methodology, that illustrate notable best practices and processes (used by top technology companies) to create successful market-driven products.

Business and Market Planning[™] (BMP) - This one-day advanced seminar provides attendees with the knowledge, skills and tools to effectively contribute to business and market planning activities. Companies operate in dynamic and complex environments that impact their ability to be profitable. Consequently, it only makes sense to pre-plan the direction of a business so that the products and services it provides meet the overall business objectives. This seminar explores key concepts and processes used in formulating plans that evaluate market opportunities and shape the resulting marketing efforts; i.e., business cases and market plans.

Strategic Product Management for Marketers[™]
